WRAP WIZARD

Instructions

The Wrap Wizard is the designers dream. From large background fills ready to be dragged on to your templates to transparent Lightning, barbwire, flames, rips, gears, and chain. There are an unlimited number of combinations and designs to be achieved with the Wrap Wizard.

The solid background fills are all .jpg format and are compatible with almost every piece of designing software available.

Everything else you will find on the Wrap Wizard are .tif files. Transparent .tif files will not cut. Use transparent files to float over your designs or backgrounds. These transparent files will turn your average wrap into a work of art. They are compatible with programs such as Adobe PhotoShop, Corel Draw, Photo Paint, Sign Wizard and others. Check your program for compatibility as some mainstream sign making programs do not support transparent .tif.

For further instructions on how to use Flexi, Signlab, Photoshop, Illustrator, Corel Draw, Gerber Omega, Sign Wizard or other third party software programs you may be using, please refer to the documentation or HELP files that came with those programs. We support what we sell, but do not offer training for third party software programs you may be using.
