QUICKSTART INSTRUCTIONS

The Digital Skullz disk comes loaded with files in many formats for use in all mainstream design applications. You'll find files in .jpg format which will be well suited for use in applications such as SignLab™ and FLEXI™. And you'll also find files in .tiff format which are great for use in programs like Adobe™ Photoshop™ or Corel™ DRAW!™. You will also find a file folder called, "Workpaths." These workpath files (.ai format) are used as clipping paths in vector based programs. They enable users of programs which are unable to support transparent .tiff images to be able to combine and layer bitmap images with vector images. If you are working with these images and find there's a white or black background you cannot remove, you will need to use the corresponding workpath file in order to knock that background out. Keep in mind that Photoshop™ and Corel™ DRAW!™ support transparent .tiff so using the workpaths is not necessary in these applications.

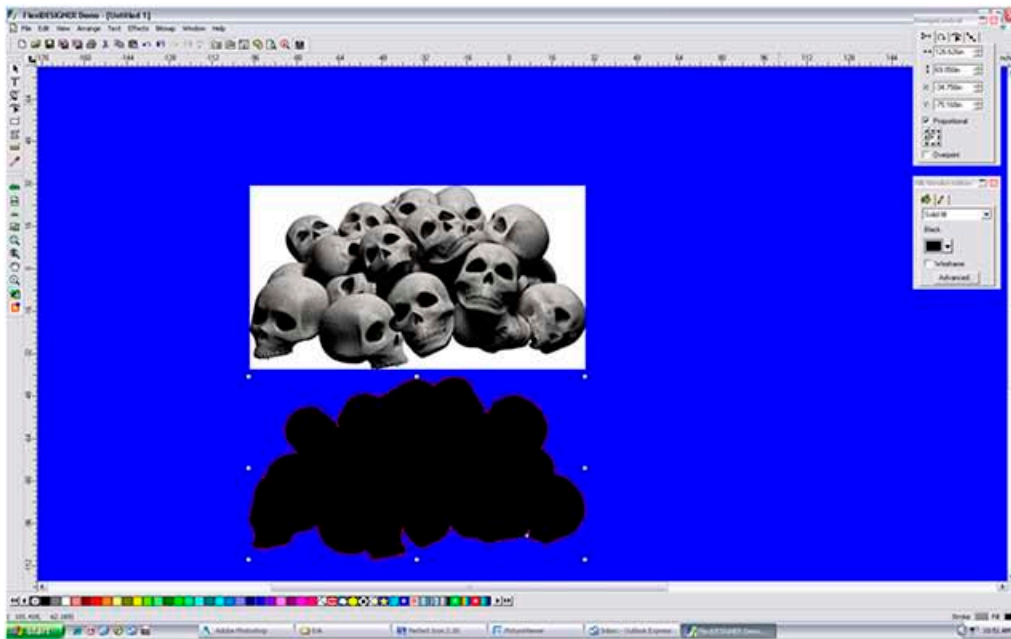

USING WORKPATH FILES IN FLEXI™

First you will need to import the .jpg image and the .ai image into FLEXI™.

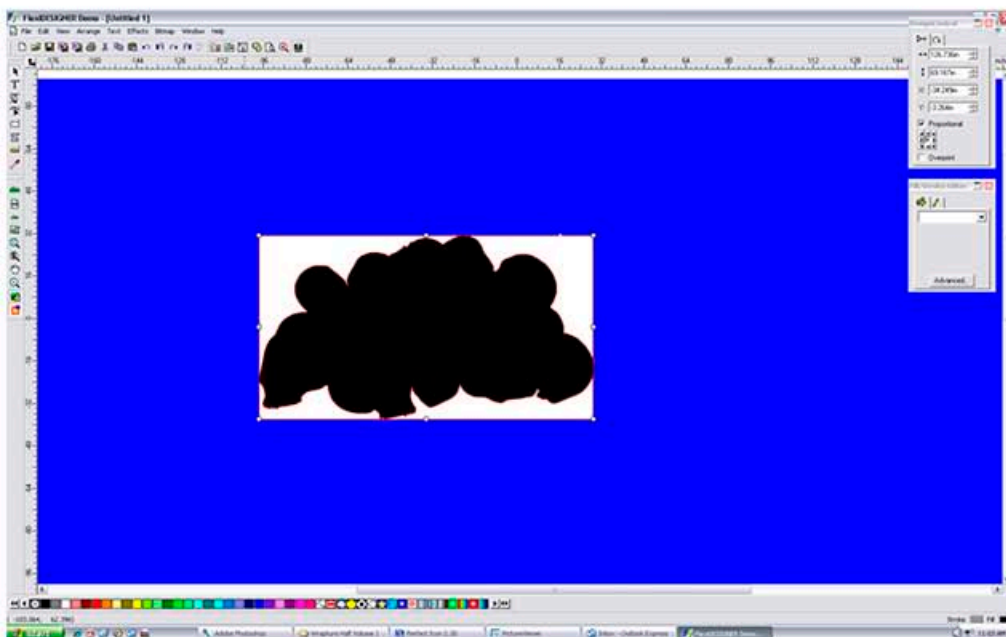

I have added a blue background to show that there is a white background around our skull image.
We will knock this background out using a workpath.

Now we will import the corresponding workpath file located in the, "workpaths," folder.

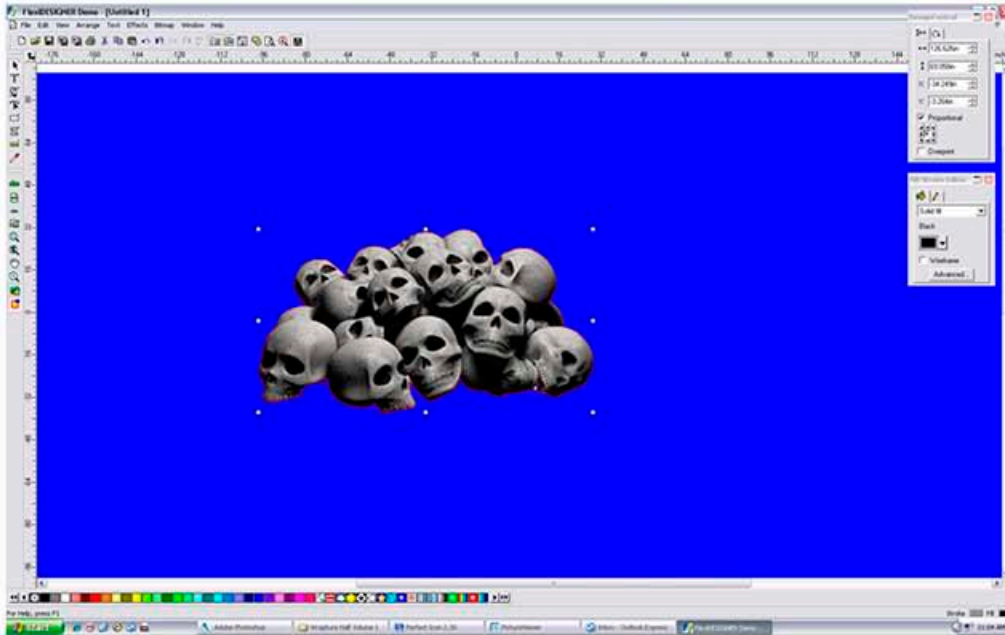

You will want to be sure the workpath file is at the top of the order.

Next we will align both the .jpg image and the workpath by selecting them both at the same time and on your keyboard hit CTRL+5.

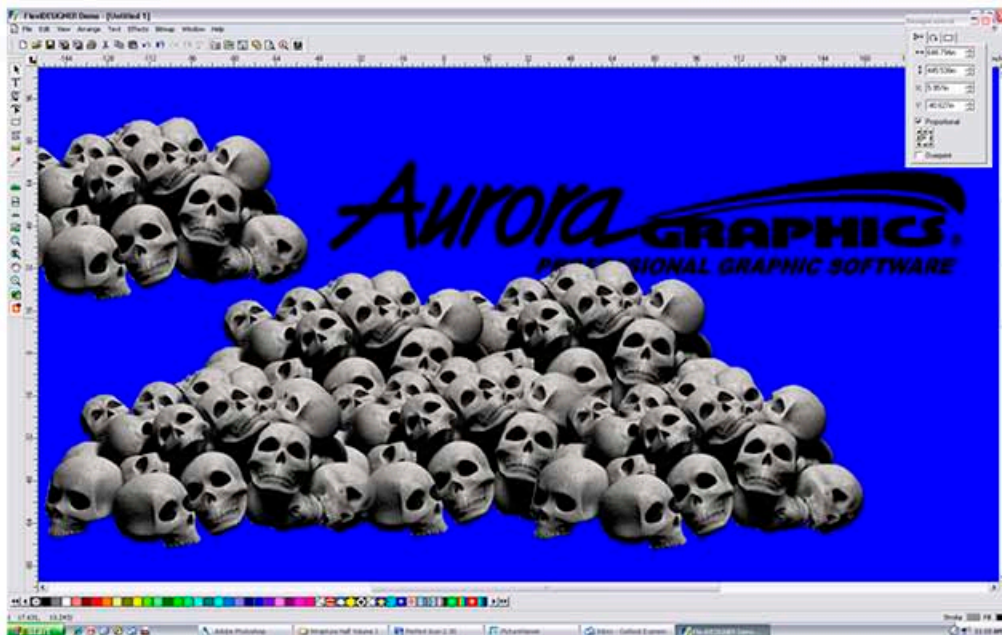

While they are both still selected click: Arrange>Mask>Mask...

As you can see the print image is now masked by the workpath.

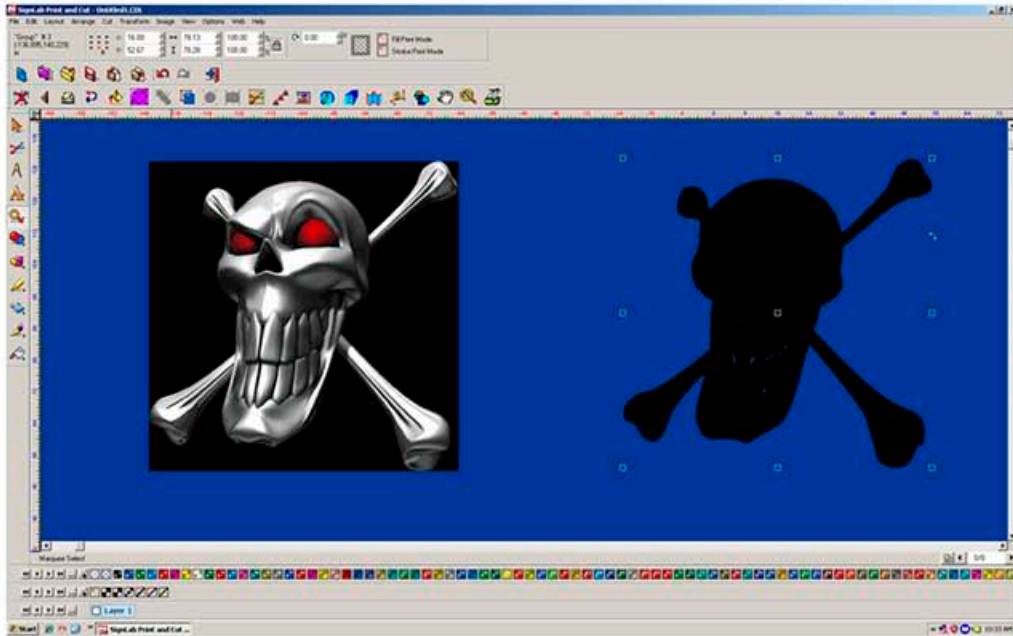

You can now use this image as if it were a regular vector shape.

(Note: Not all skulls come with a workpath)

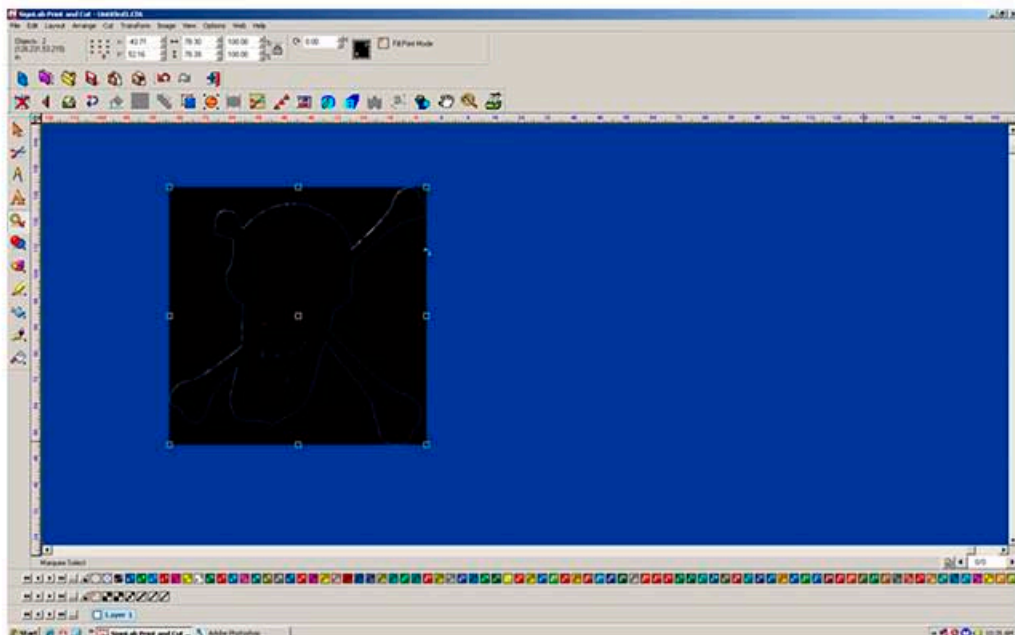

Using Workpaths in SignLab™

Start by importing the .jpg print file and .ai workpath file into SignLab™.

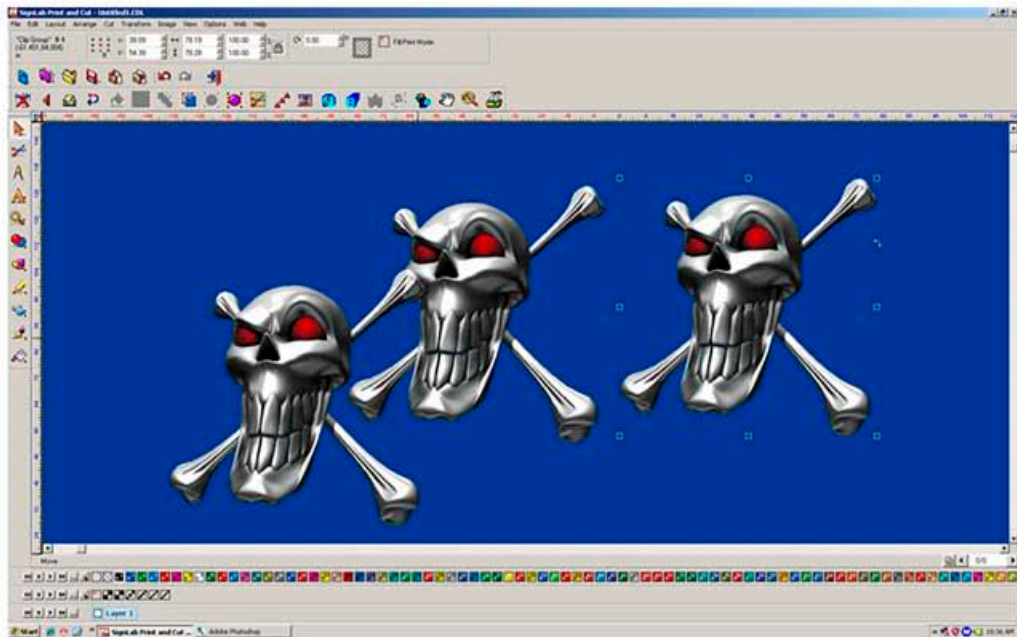

If the workpath file shows up with no fill, simply click a color swatch from the color palette while the workpath is selected.

Next be sure the workpath file is on top of the print .jpg file and align the 2 files. To do this select both the print .jpg file and the .ai workpath file at the same time and click: Layout>Arrange and Distribute>Align to Selected> Centers Horizontally> and repeat Centers Vertically.

The workpath should now cover the print file.

Now, with both files still selected click: Arrange>Clipping>Clipping.

You will now be able to use this image in SignLab™ as a regular vector shape with no background.

(Note: Ornate Dagger Skull, Molten Lead Skull and Grim Reaper Skull do not come with workpath files)
